DLS 5204 - xDSL Four Output Custom Noise Generator

Real world noise such as cross-talk , RFI, impulse and white noise has a dramatic impact on the performance of modems and DSLAMs. Standards bodies such as DSL Forum, ANSI, ETSI and ITU-T have captured many of the worst case scenarios and specified testing requirements for noise impairments. In response to service providers' demands for these requirements, Spirent has developed the DLS 5204 xDSL four output custom noise generator. The DLS 5204 provides all the impairments specified by the leading specifications and is able to apply them via Spirent noise injection systems in either differential or common modes.

Spirent is pleased to announce the availability of the DLS 5204 Second Edition; an enhanced noise generation platform which enables additional features and benefits for the user. The DLS 5204 Second Edition provides the flexibility for the user to optionally purchase new features that provide additional capabilities. The hardware platform is shipping now from the factory; features will be rolled out in an ongoing series of v2.x.x software releases (DLS 5C20).

An upgrade path (DLS 5U07) is available for current DLS 5204 owners wishing to take advantage of the additional feature development.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
