ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

ModConnect

SST 5136-MOD-VME is referenced in the Modicon ModConnect program.

The SST Modicon Card connects your VME computer to a Modicon 800 Series or Quantum I/O network on the S908 network.

Applications

- VME Scanner
- I/O Monitoring and Simulation

Custom Driver Development

The Modicon VME card interfaces with the host processor through shared memory. A documented host memory interface is provided. The card does not require external libraries, which simplifies custom driver development in your chosen operating system. DOS example programs with C source are included with each card to assist you with your software development.

Interface Cards for Modicon Networks

VMEbus interface card (5136-MOD-VME)

Data Sheet

Conventional methods of exchanging data between VME systems and programmable controllers can be slow and cumbersome. The Direct-Link 5136-MOD-VME interface card allows direct connection to the Modicon S908 Remote I/O network and the exchange of all I/O data at 1.544 Megabits/second without any loading of the host CPU.

Flexibility

The Direct-Link interface is totally programmable. Various software modules can be downloaded to allow it to do different functions. Current software modules allow the Direct-Link interface to:

- Drive Modicon 800 series I/O from a VME host
- Receive all I/O data from all the I/O drops
- Simulate I/O drops and modules in the system

Implementation

The Direct-Link interface builds a real-time data table of all the I/O events in dual-ported memory. This I/O data table is available to all the devices on the VMEbus just by reading and writing to this data table.

I/O communication status on all the devices on the I/O line is available every scan by reading the dual-ported RAM. Included with the interface card is the C language source code for data access routines. The Direct-Link interface card can be software configured after power up to reside anywhere in standard memory.

Advantages

- All serial and parallel communication ports remain available for other applications
- Complete communication error checking is performed on the Direct-Link card
- I/O data is available at memory access speeds, typically tenths of microseconds
- Host software development is simplified
