OE455 optical-to-electrical converter shown with multi-mode fiber jumper attached.

Teledyne LeCroy's wide-band multi-mode optical-to-electrical converters are designed for measuring optical communications signals. Their broad wavelength range and multi-mode input optics make these devices ideal for applications including Gigabit Ethernet and Fibre Channel, as well as SONET/SDH up to 2.5 Gb/s.

The OE425 and OE455 are ProBus modules compatible with WavePro® oscilloscopes, as well as WaveMaster® when used with a LPA-BNC adapter.

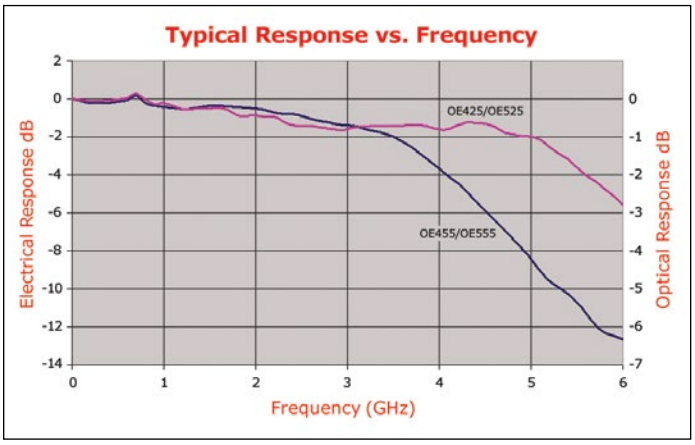

The OE525 and OE555 are ProLink modules compatible with WaveMaster, SDA models, and DDA oscilloscopes.

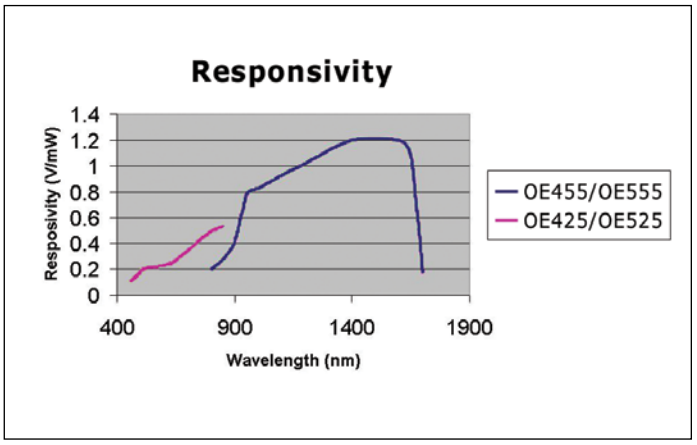

Universal Calibrated Reference Receivers

The O/E converters contain calibration data that can be used to create optical reference receivers for SONET/SDH (up to OC48/STM16), Fibre Channel, Gigabit Ethernet, and other optical standards. This feature is available when the O/E is used on a WaveMaster Series oscilloscope. The universal reference receiver supports any data rate up to 3 GHz and remains calibrated on any channel of any WaveMaster.
