Series 300 Stainless Steel Double Door Desiccators

Hermetically sealed, nitrogen-purged cabinet maintains low-humidity storage conditions to minimize moisture-related defects, increase yields

Adjustable stainless steel shelves accommodate most sample and container sizes, including SMIF pods, 300mm wafer boxes, and kitting trays

Large double doors, with heavy-duty Lift Latches™ and door hinges, provide years of trouble-free storage under heavy use

304 Stainless steel construction, available with electro polished finish, meets the highest standard of cleanliness, wipes down clean

Static-dissipative PVC viewing windows (if installed) control static charges and the particles they attract

These 304 stainless steel desiccators provide all the humidity control features of our smaller models, along with double doors that afford unrestricted access to the entire storage area.

Made of mirror-finished 304 stainless steel, these cabinets are designed for optimal strength and cleanliness. The electro polished stainless steel model meets the most critical particle requirements. Static-dissipative PVC viewing windows (if installed) ensure full visibility of stored parts and minimize the danger of electrostatic discharge that could damage sensitive components. Two sets of chrome-plated Lift Latches, with one-piece, non-out-gassing elastomeric gaskets, seal each door snugly.

Each shelf is perforated along the rear edge to permit unrestricted gas circulation, and can be positioned at any height you desire by means of clip supports. Optional 4" stands are recommended to allow easy cleaning beneath the cabinet.

For optimal humidity and particle control, select the optional Dual Purge System and NitroWatch Humidity Controller. The standard cabinets come equipped with an Automatic RB (Relief/Bleed) Valve to ensure safe pressure relief.
