Invitrogen™

SureLock™ Tandem Midi Gel Tank

The Invitrogen SureLock Tandem Midi Gel Tank provides for rapid electrophoresis of midi gels using minimal buffer (~520 mL/gel) Read more

Catalog number STM1001

The Invitrogen SureLock Tandem Midi Gel Tank provides for rapid electrophoresis of midi gels using minimal buffer (~520 mL/gel) in a leak-free system. With a setup time of ~30 onds, the tank efficiently runs midi gels while also providing consistent performance. ank features two independent chambers, allowing electrophoresis of one or two gels at

Features:

- **2-in-1 gel electrophoresis and transfer tank**—enables electrophoresis and transfer of high-performance Invitrogen midi gels using the same tank
- **Two separate chambers**—run 1 or 2 gels or transfers and use only the necessary amount of buffer for each gel, minimizing buffer cost and waste
- **Optimal performance with fast protocols**—saves time while yielding better results
- **Room temperature transfer when paired with SureLock Tandem Midi Blot Modules**—eliminates the need to pre-chill buffers and the hassle and messiness of ice baths
- **User-friendly**—easy setup and simple workflow
- **Does not require dummy cassette or buffer dam**—reduces accessories
- **Compatible**—fits all Invitrogen precast midi gels and midi gel cassettes
- **Modern design** provides easy access to sample loading area reducing sample loading time and effort
- **Robust design** using strong polycarbonate plastic that prevents cracks and leaks
- **Unobstructed visibility** to your gels as they run
- **Easy fitting lid** with guiding notches and wire management hooks

The SureLock Tandem Midi Gel Tank can be used for wet tank transfers when paired with the SureLock Tandem Midi Blot Module. The SureLock Tandem Midi Blot Module performs efficient, room-temperature, wet protein transfers for downstream western blot analysis. The tank accommodates two blot modules, allowing transfer of one or two gels at a time. The unique design of the SureLock Tandem Blot Module uses considerably less transfer buffer (only ~300 mL per transfer) than other wet transfer systems. This lower buffer requirement keeps the amount of methanol waste (a hazardous material) to a minimum.
