Extension Tubes with External C-Mount Threading and Internal SM1 Threading

Zoom

These extension tubes introduce a fixed spacing between an SM1-threaded system and a C-Mount threaded component, like a CCD camera. This length is listed in the table below as L_2. The internal diameter of 1.035" allows Ø1" optics to be mounted; one SM1RR retaining ring is included with each extension tube, and additional retaining rings can be purchased below. The C-Mount thread depth is 0.16" for all extension tubes. These extension tubes cannot be stacked with each other, but they can be lengthened by adding SM1 stackable lens tubes. For custom extension tube lengths, contact Tech Support.

Includes One Retaining Ring
