OPTIONAL ACCESSORIES

RESTRAINING PLATE FIXTURES for leak testing pouches have semi-porous surfaces to stabilize expansion during pressurization without blocking any holes in the surface material.

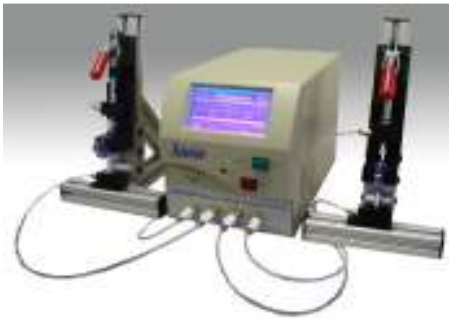

Restraining plate fixtures for seal strength tests provide consistent stress loading on all seals.

LA-05 FILTER DRYING ASSEMBLY dries and removes water, oil and particulate matter from pressurizing air. The TME *Solution* requires clean, instrument quality air in order to maintain the warranty on the instrument.

RS-01 RADIAL SEALING FIXTURE is a pneumatically operated clamp that provides either a sealed leak tight access to a tubular product or a sealed leak tight dead end to the product during pressure decay leak testing. The radial sealing fixture can be configured to diameters from approximately 0.022 to 6.000 inches.
