Legacy VME modules

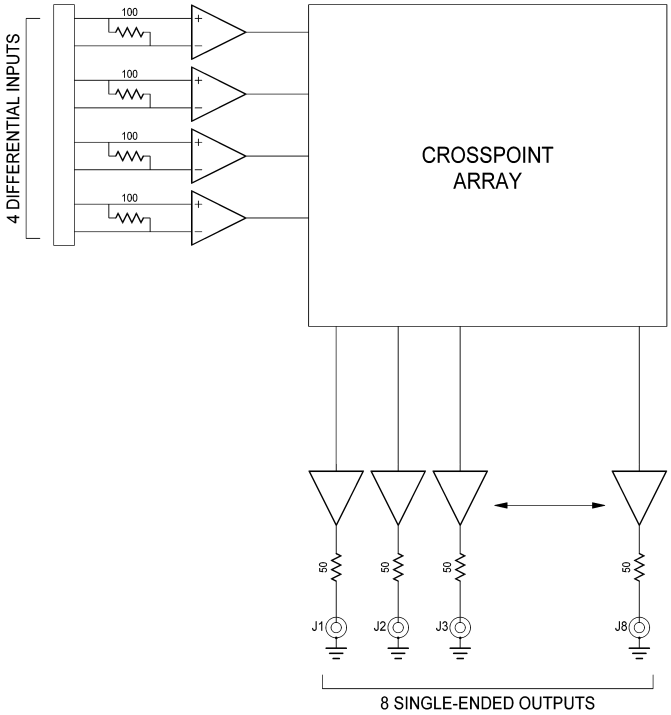

To further expand our switching product line, Universal Switching can develop some VME modules to help support meet specialized legacy needs in the communication and telemetry industries. These modules offer a alternative for system integrators when choosing switching assemblies to support or expand the life of existing VME designs.

Shown here is our Model VME-DS1208 module. It has a 6U style profile that delivers a 4x8 digital non-blocking full fanout matrix function. The four inputs to the module are located on the single DA-15P connector on the faceplate. Each input is a differential 422 type input pair with a 100 ohm input termination across the pair.

The eight outputs are also located on the faceplate and are presented as single-ended 50 ohm TTL outputs on individual SMB connectors. Any input can connect to any output, many outputs, or up to all outputs at the same time. Status LED's on the faceplate indicate the health and control status of the module.

NOTE: If you have a requirement for a new VME module, contact our local sales representative or the factory directly.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
