

ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

ProStar™ 420 AutoSampler

- Low volume, no loss sampling
- Use of multiple sample vial formats
- Options include a biocompatible configuration and thermostatted sample tray

Intelligent Automation at Your Fingertips

The ProStar 420 AutoSampler is a versatile multifunctional instrument for HPLC. It is ideal for both routine analyses and for method development. With the ProStar 420's modular footprint requiring only 28 cm (11 in.) of space, your laboratory work area is efficiently used. Impressive sampling technology is used to achieve the highest injection precision allowing the ProStar 420 to inject from as little as 5 µL volumes. The flexibility of the ProStar 420 will astound you with features like integrated solvent stream switching and column selection valves, plus the ability to accept multiple vial sizes, even inexpensive PCR microtubes.

Advanced Injection System

The ProStar 420 utilizes a unique double needle design. This consists of a stainless steel outer needle which is used to puncture the septum, followed by a PEEK capillary which is used to aspirate the preprogrammed sample amount into the sample loop. No more septum coring, bending or plugging of the sample needle. The Pressure Assisted Sampling (PAS) technique slightly pressurizes the contents of the vial for unbeatable sampling accuracy and reproducibility. PAS in combination with the ProStar 420's 0.004 µL dispensing precision, gives excellent injection precisions down to 1 µL levels to satisfy the demands of research as well as for high throughput routine analysis laboratories. The ProStar 420's flexible sample tube can accommodate biomolecules by using either the nonmetal Silcosteel® or PEEK materials.

Variety of Vial Sizes

For maximum flexibility the sample carousel is composed of 8 segments, each containing different vial sizes that can be mixed and matched. Vials ranging from 0.16 to 10 mL sizes can be used for injecting volumes ranging from 1 to 1,000 µL. By using a vial height sensor, the ProStar 420 guarantees consistent depth penetration of the sampling needle, independent of vial height variations up to a 48 mm (1.9 in.) size. Maximum vial and volume options offer the user the greatest amount of flexibility.

Automated Features

A versatile reagent mixing routine enables aspirating and dispensing a programmed volume from any vial into any other vial in the sample carousel. Using an aspirating/dispensing cycle with a programmable syringe speed makes automated pre-column derivatizations, dilutions, pH adjustments, etc., possible. The programmable sampling height capability allows injections from difficult samples such as two-phase mixtures, or samples containing precipitates. The ProStar 420 can be fitted with two integrated stream selection valves for fully automated sample cleanup or preconcentration. The valve option can also be used as a column selection valve. For additional flexibility and performance, the ProStar 510 Column Thermostat can be mounted next to the ProStar 420. This allows the optional side mounted Valco Injection Valve and optional stream selection valves to be mounted inside the oven compartment, thus controlling the sample's temperature throughout the chromatographic process.

Specifications					
Sample capacity:	Standard 96 x 1.8 mL vials, 12 vials per segment				
Optional trays:	160 x 0.5 mL vials, 20 vials per segment 72 x 4 mL vials, 8 vials per segment 32 x 10 mL vials, 4 vials per segment				
Injection volume:	1 to 1,000 µL				
Injection methods:	Loop overfill, partial loop fill, µL pick-up with no sample loss				
Replicate injection number:	Up to 9				
Needle wash:	User programmable, 300 – 9,999 µL Separate needle wash port and waste				
Wash solvent:	250 mL integrated wash solvent bottle				
Syringe dispenser:	100 µL, 250 µL (standard), 500 µL or 1,000 µL				
Vial detection:	Missing Vial detection through vial sensor				
Reproducibility:	• **Loop Overfill**: less than 0.3% RSD • **Partial Loop**: fill less than 0.5% RSD for injection volumes greater than 5 µL • **Microliter Pick-up**: less than 1.0% RSD for injection volumes greater than 5 µL				
Carryover:	Less than 0.01% with needle wash				
Minimum sample volume:	• **Partial loop fill injections**: 35 µL • **Pick-up injections**: 5 µL				
Module/Computer Interface:	• **Communication Output**: Inject marker, Vial marker, Labeled vial marker, Stop I/O (contact closure and TTL), Vial number BCD or HEX (TTL), 4 Auxiliaries (contact closure), 2 programmable outputs (contact closure) • **Input**: Next Injection, Next vial, Freeze, Stop I/O, 4 programmable inputs (all TTL) • **Serial Interface**: RS 422/485 for Galaxie or Star Workstation • Optional tray cooling • Peltier type cooling elements. • **Range**: 4 to 40 °C programmable (Cooling capacity min. 20 °C below ambient)				
Power requirements:	115 Vac; 50/60 Hz; 250 VA 220 Vac; 50/60 Hz; 250 VA				
Dimensions and Weight					
Size:	**height** 17.3 in. 44 cm		**width** 11 in. 28 cm		**depth** 21.3 in. 54 cm
Weight:	48 lb / 22 kg 66 lb / 30 kg with cooling option installed

ProStar™ 420 AutoSampler Accessories

ProStar 420 Autosampler Tray Segments

Tray segments accept the following vial sizes: 0.5 mL/ 7 mm OD; 2 mL/ 12 mm OD; 4 mL/ 15 mm OD; 10 mL/ 23 mm OD
Vials per segment: 0.5 mL/ 20 vials; 2 mL/ 12 vials; 4 mL/ 9 vials; 10 mL/ 4 vials
The "10 mL" segments accept 6 mL or 10 mL vials.

Segment	0.5 mL	2 mL	4 mL	10 mL	Quantity (Each)
