The Signature Series Air Jacket CO_2 Incubator

Temperature Range: Ambient +8°C - 60°C
Temperature Uniformity: +/-0.4° @ 37°C
CO_2 Range: 0-20%

The air jacketed CO_2 Incubators feature a slim, lightweight design that minimizes contamination. The 5216 can be operational within hours of installation and is well-suited for multiple users. Three temperature control settings (main chamber, external door and chamber front) minimize condensation and facilitate superior temperature uniformity. This fine tuning capability creates optimal culturing conditions.

Like the other Signature Series models the 5216 is equipped with the VWR copper coated HEPA filtration system.

Unparalleled Controls

A bright, digital keypad for CO_2 and temperature control is highly visible even from across the lab. These intelligent microprocessors constantly monitor and adjust program settings and allow calibration of CO_2 and temperature. The redundant over-temperature safety system helps protect your samples from overheating. A door switch that automatically turns off the gas when the door is opened will help conserve your CO_2 gas.

Shelf Standards Are Hung Using Key Hole Design

Shelf Slides Are Fully Adjustable

Unique Design Ensures the Shelf Won't Tip After Installation

Install and Remove Shelving Without Tools
In All VWR Select & Standard CO_2 Incubators
