VWR™ Galaxy 7 and 16 Centrifuges

- Two speed ranges
- Analog control with easy turn knobs
- Quiet operation
- Cold room compatible

These two variable speed, analog microcentrifuges are quality units that will stand up to the rigors of continuous duty. Exceptionally quiet, and they require very little bench space.

The Galaxy 16 is supplied with an 18 place rotor and has a maximum speed of 14,000 rpm/16,000 x g, making it suitable for DNA and protein work. The motor is brushless for quick acceleration and smooth operation. With a maximum speed of 10,000 rpm/ 7,200 x g, the Galaxy 7 is perfect for quick spins and microfiltration. It is supplied with a 12 place rotor. Airflow patterns within the chambers of both units keep sample temperature rise to a minimum, even at maximum speed. For applications requiring subambient temperatures, these centrifuges may be used in a cold room.
