Features

- High voltage range with up to 500 V_{pp}
- 16 Bit Waveform Digitizer 64 MS, 10 MS/s
- High precision Digital Multimeter with 16 Bit resolution
- Fully isolated design
- >1 GΩ || <20 pF input impedance up to 8 V range
- 10 MΩ || <20 pF for all other ranges
- Extremely low switching time of <1 ms for ranges and functions
- 2- and 4-wire resistance measurement
- Highly configurable trigger matrix
- Trigger engine for instrument synchronization
- Built-in timer/counter engine
- Electronic protection against overcurrent and overvoltage
- Memory segmenting
- Available with PXI or PXI Express interface

Product Information

General

The PXM(e)7820 High Speed Multi-Measurement Device combines a 16 Bit DMM, a 10 MS/s Digitizer with a resolution of 16 Bit, a timer/counter and a trigger card. One special feature of the PXM(e)7820 is a very high input impedance of 10 MΩ || <20 pF also in all AC ranges. Therefore the influence on DC and AC signals is reduced to a minimum.
A trigger input and output is provided as well as electronic protection against overvoltage and overcurrent.

High voltage, high resolution Waveform Digitizer

The PXM(e)7820 High Speed Multi-Measurement Device features waveform sampling with 10 MS/s, 16 Bit resolution, input voltages up to ±250 V_p and a bandwidth up to 5 MHz. This allows the measurement of high voltage signals without additional signal conditioning. Data can be acquired before and after the trigger event with a programmable sample counter that controls a number of up to 64 million data points. The memory segmenting function allows to save different digitizing events in the memory.
A great amount of trigger capabilities results in multiple instrument and channel synchronization possibilities.

High precision Digital Multimeter

The PXM(e)7820 High Speed Multi-Measurement Device features a high precision Digital Multimeter (DMM) for high performance measurements with 16 Bit resolution.
It provides measurement of DC voltage up to 250 V, AC voltage up to 250 V_P, DC current up to 1 A and AC current up to 2 A_P.

High resolution timer/counter

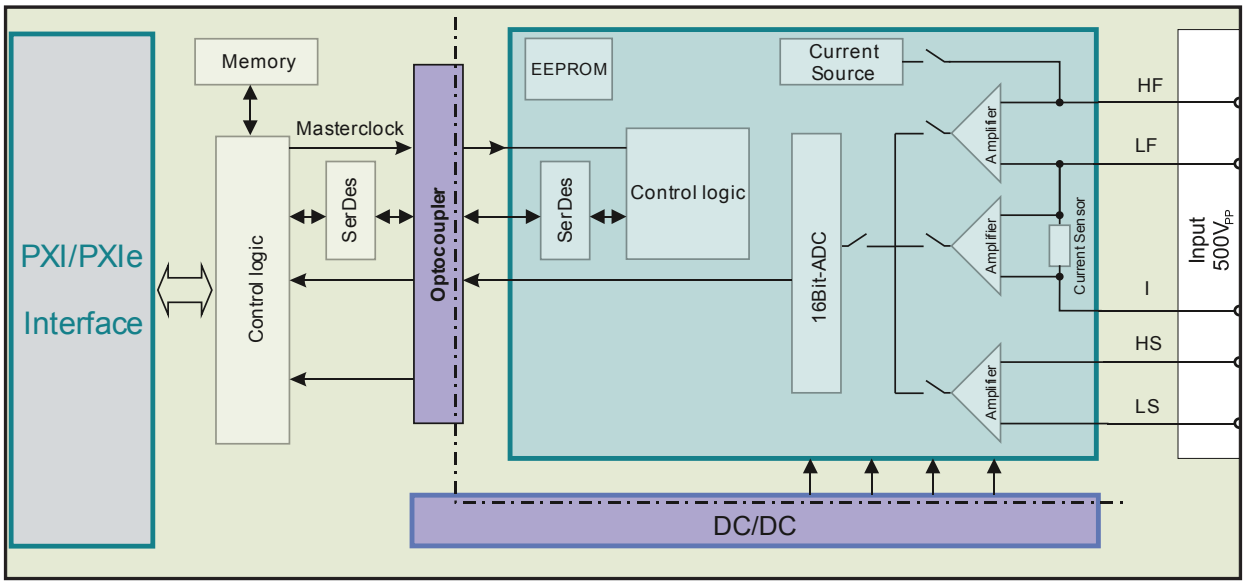

The PXM(e)7820 High Speed Multi-Measurement Device features a high precision timer/counter for high performance measurements of frequency, period time, interval and pulse width and rise and fall times with a resolution of up to 100 ns.

Configurable trigger matrix

The PXM(e)7820 High Speed Multi-Measurement Device features a complex trigger matrix. Both trigger connectors, internal trigger events and all trigger lines on the backplane can be connected individually.

High throughput design for many applications

The PXM(e)7820 High Speed Multi-Measurement Device is designed for high throughput production testing. One key feature is the extremely low switching time of <1 ms for the changing of ranges and functions like switching from AC to DC.

General	Specification	Comment
Module size	1 slot, 3U	
Module weight	<0.7 kg	
Front connector type	FM5W5P	
Storage temperature range	-25 ... 70°C	
Operating temperature	0 ... 40°C	
Operating altitude	<2 000 m	
Relative humidity	Up to 85% at 35°C	
Electrical safety	According EN61010-1	
Isolation input to PE	250 V CAT I, Pollution Degree 2

Time Base	Specification	Comment
Accuracy	1 ppm	In operating temperature range
Aging per year	1 ppm	In operating temperature range

[1] DC accuracy specified for an average value of 100 samples with a sample rate of 5 kS/s and active 10 kHz filter performed within 24 hours after an offset correction.

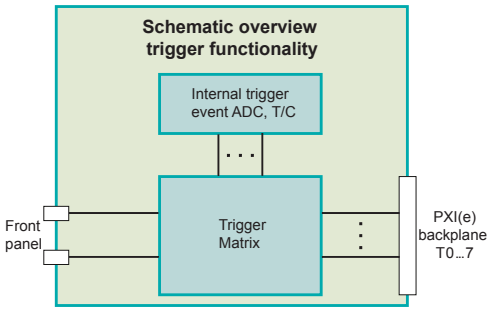

Notes: All product data are specified for 1 year at an ambient temperature of 23°C ±5°C (after 1 hour warm-up time). Product specification and description in this document are subject to change without notice.

Trigger

Trigger System	Specification	Comment
Input from		
Internal function module	Module can trigger itself	
Software	Via software command	
Front connector	Front trigger input (TTL level)	
PXI trigger	Trigger 0 ... 7 and star trigger	From the PXI backplane
Output to		
Internal function module	Module can trigger itself	
Front connector	Front trigger output (TTL level)	
PXI trigger	Trigger 0 ... 7	To the PXI backplane
Level resolution	16 Bit	
Level accuracy	0.6 + 0.3	±(% of programmed value + % of full range)
Trigger delay	0 ... 200 s	Programmable delay, 100 ns resolution
Trigger slope	Positive or negative	
Trigger hysteresis	0 ... 100% of signal range	Programmable via software
Pre-Trigger	0 ... 100% of full record length	Trigger is armed after all pre-samples are captured; post-samples are captured after trigger
Post-Trigger	0 ... 100% of full record length	Number of samples captured after trigger event
Trigger Mode	Asynchronous, synchronous level, synchronous slope

Range 128 V_{RMS}	0.15 + 0.1	0.1 + 0.1	0.2 + 0.1	0.8 + 0.1[9]

1 For measurements >10% of range.
2 ±(% of reading + % of full scale).
3 For sine wave signals >5% of range.
4 Maximum peak input voltage = 2x full scale (e.g. maximum input voltage for 128 V_{RMS} range = ±256 V_p).
5 With auto offset correction.
6 With DC coupling.
7 5 PLC.
8 Measurement aperture greater than 5/f_{Low}, where f_{Low} is the lowest frequency component of the signal being measured.
9 Maximum input voltage must be satisfied.

DC Current Measurement	Specification	Comment
Resolution	16 Bit	
Maximum input current	±1 A
